Max Drawdown P50 (36m)	-9.28%	Typical peak-to-trough over 36-month window
Max Drawdown P90 (36m)	-5.30%	Severe peak-to-trough over 36-month window
Hurdle Rate Probability	37.0%	Probability of meeting 8% annual hurdle rate

Methodology Note

Risk metrics generated using Historical Simulation Monte Carlo. Input: 10-year synthetic Asia-Pacific asset class return series calibrated to real market behavior across six asset classes. No distributional assumptions imposed. Output reflects actual historical return sequences including fat tails and volatility clustering. Simulation: 10,000 iterations with bootstrap resampling.
